A GREAT TIME ENJOYED BY A FEW

On Saturday afternoon July 27th, 8 Corvair Club members and guests attended the home of the Ron + Lynn Bloom at thier lovely home, basically in thier refreshing pool.

We swam, played, splashed, laughed, and enjoyed it , until the lightning came, we then moved under the awning. We ate some great food and had fun fellowshiping together.

I don't understand why more were not there?

If you have any suggestions for any activity that you think many will enjoy - Speak Up!

Please attend the regular meetings so we'll all know what is happening.

Signed New Member
Barbara Galbreath

WHAT KIND OF MEMBER ARE YOU?

ARE YOU AN ACTIVE MEMBER,
THE KIND THAT WOULD BE MISSED;
OR ARE YOU JUST CONTENT
THAT YOUR NAME IS ON THE LIST.

DO YOU ATTEND THE MEETINGS,
AND MINGLE WITH THE FLOCK,
OR DO YOU STAY AT YOUR OWN HOME
AND CRITICIZE AND KNOCK.

DO YOU EVER WORK ON COMMITTEES,
TO SEE IF THERE IS NO TRICK,
OR LEAVE THE WORK TO JUST A FEW
AND TALK ABOUT THE CLIQUE.

SO, COME TO THE MEETINGS OFTEN,
AND HELP WITH HAND AND HEART,
DON'T BE JUST A MEMBER
BUT TAKE AN
ACTIVE PART !!!!!

How To Obtain 12 VAC & 110 VAC From A Corvair Alternator

by Smitty Smith, Tidewater Corvair Club

This is how to wire your Corvair alternator to get a source of 12 volts AC and convert it to 110 volts AC to operate Christmas lights or other 110 volt devices. This requires going inside the alternator. This procedure will result in two permanent leads coming out of the alternator that can be connected to a transformer to obtain 110 volts. This can not be done from the car's normal 12 volt DC electrical car circuit.

1. Remove ground cable from battery.
2. Disconnect wires and rear brace from alternator.
3. Loosen idler and slack fan belt.
4. Remove the 4 hex head alternator assembly screws. Might want to scribe reference marks on the case halves.
5. Slide rear housing and stator winding core off of the alternator armature.
6. Capture brush springs if they popped out.
7. Replace springs and brushes. Retain them in place by inserting a straightened paper clip in the hole in the back of the case.
8. Fasten new wires (about 14 gauge) with terminals under the two right hand nuts (of the three) stator terminals.
9. Pass wire under stator leads around to left and exit case through small rectangular hole next to BATT terminal at rear of case.
10. Crimp female spade terminals (plug in type) on ends of wires. (One each)
11. Place heat shrink over terminals in such a manner that it extends 1/8" to 1/4" beyond terminal. Shrink tubing over terminal with match.
12. Reassemble alternator, remove paper clip holding brushes in place and retension fan belt.
13. Replace all original alternator wires before reattaching battery cable.

The above procedure gives a 12 volt AC source to hook up to a transformer. To get 110 volts, hook the new wires from the alternator to the 12 volt side of a 110 volt-to-12 volt transformer. Normally, transformers that are physically larger have higher amp ratings. Hook a standard 110 volt receptacle to the 110 volt side of the transformer. Be sure to insulate everything real good. Plug 110 volt Christmas lights or whatever into receptacle.
